AMP puts its name on the line with membrane keyboard technology.

Combine the industry-leading membrane technology with the number one name in interconnection systems, and you've put your finger on AMP membrane keyboards.

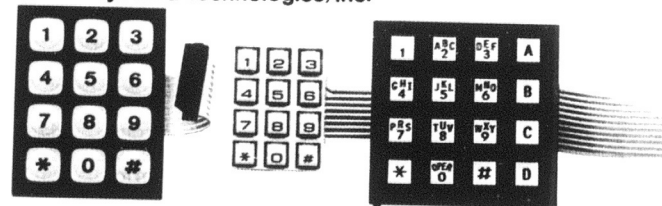

Our extensive experience in conductive inks, for instance, offers you circuitry that does not flake or peel—with reliable switching for millions of actuations. You have a full choice of touches, too: micromotion, tactile, short or long travel.

What's more, you have the advantage of AMP interconnections. Connectors for parallel or vertical cable entries. Connector clips that eliminate the need for conventional contacts and molded housings. Multiple crimp contacts ideal for pc boards or plug and receptacle systems.

Along with our technological experience and innovations in making volume production a practicality, we offer worldwide engineering support that has no equal. Now, what can we do for you? Call us at (717) 780-8400. Or write AMP Keyboard Technologies, Inc., Harrisburg, PA 17105.
