

**For Performance, Longer Life.** The key to our Golden Touch<sup>®</sup> keyboard is our patented, hinged-moving-plate design. This unique feature gives our keyswitch greater capacitance, and that makes it virtually impervious to dust, debris and electrical noise. And that means better performance. It also means longer life—an MCBF rated at 200 million operations. That's why we guarantee a 1% AQL and give a two-year warranty. We design the Golden Touch exclusively for volume OEMs, so practically any combination of options, circuitry and configuration can be built-in. And with all this, the price is highly competitive. To learn more, just fill in the coupon or attach your card to this ad and mail it back to us.
