

# NO DESIGN LIMITS. THE KEY IS DIGITRAN.

Digitran Minikey® arrays—they'll take you as far from conventional keypads as you can get. Because at Digitran we make Minikey arrays in virtually unlimited shapes, colors, sizes, configurations. Our strong plastic engineering capability means that we can even mold a complete housing and key array to your design. □ The point is—you are no longer limited to conventional key pads. Think of our Minikey arrays as an integral part of your total design. □ Our keys are special, too. We can make them practically any color or shape, with an unlimited choice of legends. Or, if your application calls for a rocking key or LED illumination, Digitran can deliver... with the same quality and reliability you've come to know in our other switch products. □ So while the looks are up to you, the works are reliably Digitran. And Digitran delivers—with fast turnarounds. And on time. Sure, we still make Minikey keypads, but you're no longer limited. The choice is yours, but the key is Digitran.

For free short form catalogs on our Minikey arrays or any of Digitran's other switch products, or for consultation on your specific requirements, call Digitran.
