

JUST ONE WORD DESCRIBES OUR NEW LOW-COST STANDARD KEYBOARD:

SMALL BUSINESS COMPUTER intelligent-
terminal WORD PROCESSOR personal-
computer COMMUNICATIONS SYSTEM-
electronic typewriter GRAPHIC TERMINAL-
military PERIPHERALS.

The standard Digitran keyboard is programmable. The keyboard is standard — the application software is not. Our new off-the-shelf 74-key KS99 Keyboard has a flexible microprocessor-based design that can be programmed by us for your application. And that's your key to reduced design and production costs — standard hardware, custom software.

Our KS99 capacitive keyboard is available in one configuration and color scheme, priced at only \$99.95 in 100's. But there's a full range of built-in features, design flexibility and Digitran quality. Features include single-piece unitized frame aesthetically designed for maximum operator efficiency, ASCII encoding, N-key rollover, keyswitch reliability of 250-million MCBF and a two-year warranty.

Give your application that Digitran touch of class. Call or write the Director of Marketing, Keyboard Division for a detailed spec sheet and ordering information.
