

ELEC-TROL KEYBOARDS

With our
Snap-Lock
Datakeys provide
keyboard flexibility

from simple
arrays to
totally integrated
keyboards

Individually available Snap-Lock DATAKEYS incorporate a hermetically sealed reed switch contact with proven reliability, operated by a moving permanent magnet. Normally open, normally closed or transfer contact arrangements available. Designed with a "Snap-Lock Insertion" feature, DATAKEYS require no hardware for mounting on a rigid metal chassis panel that will support the switch under pressures exerted during operation. The DATAKEYS are rated from low level to 10 watt loads for 20 million operations. Up to three diodes can be incorporated within DATAKEYS for steering, compatibility with MOS logic circuits or any type of diode encoding.

KEYBOARD OPTIONS

STROBE DELAY
REPEAT FUNCTION
ROLL-OVER BLANKING
ERROR SIGNAL
ODD OR EVEN PARITY
POSITIVE OR NEGATIVE LOGIC
MULTIPLE SHIFT
KEY LAYOUT FLEXIBILITY
ANY CODING
