

Keyboards? Have you talked to one of the world's largest suppliers?

The Computer Products Division of General Instrument is one of the world's leading manufacturers of full travel keyboards, keyswitches and kits.

As a matter of fact, we're number one in Europe.

We have quality, reliability and competitive prices.

We offer sealed reed and capacitive technology with both a pad and linear feel. Our custom Byte-wide chip technology (a product of General Instrument research) offers superior keyboard speed as well as cutting costs. Our exclusive "square within a square" capacitive key switch design eliminates the dead-key cracked mylar problems inherent in the old "half moon" foam designs.

As a world leader we are in a position to offer our customers an aggressive pricing package. Our keyboard design effort is centralized in Post Falls, Idaho, with four production facilities in North America and Europe.

The Computer Products Division is also your prime source for switching power supplies, deflection components and custom microprocessor-based controls.
