

We've Ironed Out Your Key Assignment Problems.

Datanetics keyboards let you assign up to 28 keys with any of 90 encoder positions to suit your present and future needs.

What's more, we've made keyboard customization about as easy and fast as can be.

A unique matrix is the reason why. It looks

and works just like a miniature PBX switchboard.

You simply "plug in" copper wires, then solder. X-Y coordinates are clearly printed on the matrix to help you make the right connections.

Put quality at your customers fingertips.
