

# LOW AND BEHOLD

## LOW PROFILE TECHNOLOGY FROM THE WORLD'S LEADING MANUFACTURER OF KEYBOARDS!

Key Tronic presents our latest innovation — the 19 millimeter "low profile" keyboard. Recent European work-station studies have determined that keyboards sitting lower on the desk increase operator comfort and efficiency. Responding to these recommendations, we've developed new world standard "low profile" keyboards. And they're still full-travel!

Key Tronic "low profile" keyboards are available in Encoded Capacitance for detached enclosures OR Wired-Only SCREENED CONTACT™ for attached applications.

Our new "low profile" technologies come with the same rugged reliability recognized in the two million Key Tronic keyboards in the field. Let us respond to your keyboard needs — Contact your Key Tronic representative today!
