

You'll Be Amazed At Our Capacity

A 100,000,000 operation
solid-state keyboard. . .

For The Price Of A Mechanical

Unbelievable? Not with the new Maxi-Switch CAP-TRON™ capacitance keyboard. You get all of the solid-state keyboard advantages—long life, high reliability, with no contacts to wear out. You *don't* get the high cost and high power requirements of traditional solid-state keyboards.

The heart of the Maxi-Switch CAP-TRON keyboard is a variable capacitance switch which has been cycled in excess of 100,000,000 failure free operations. This switch produces a capacitance change that is seven times greater than that required by the sensing electronics. This substantial margin assures reliable operation over the life of the keyboard, even when exposed to hostile en-

vironments. Unique electronic circuitry overcomes switch "tease" problems.

You get flexibility—choose either 2-key or N-key rollover, and the CAP-TRON keyboard is available in standard configurations or as a custom keyboard. Plus: the option of many keytop shapes, colors, legends, and languages.

All of this at prices you would pay for a mechanical switch keyboard. Can't believe it? Contact your local Maxi-Switch representative (you'll find him in EEM) or call the factory (612) 755-7660. We'll make you a believer in the CAP-TRON keyboard.
