

Our keyboards have reached new heights.

Low-profile SC or CT Series

Introducing full-travel low-profile keyboards from MICRO SWITCH. Low-profile keyboards that don't compromise on human factors, selection, or performance. They allow you to meet European ergonomic standards, even when they're mounted up to a nine degree angle. And they're available in capacitance and contact membrane versions. Now those are new heights.

These keyboards establish new levels of ergonomic excellence. Because of our 25 years' human factors experience, we've designed a better low-profile keyboard. With tactile feedback, pleasing appearance and good feel. And they're available to you in sloped, stepped or sculptured configurations, with just about any combination of keytop shape, color and legend.

Actual size cutaway of low-profile actuator module

These low-profile keyboards are offered with the features you expect from MICRO SWITCH. They're made under the rigorous demands of our quality assurance program, so we give you a two-year warranty and 1% AQL. They're offered by people with experience solving keyboard problems, eager to get involved early in your design process. And once the keyboards are installed in your product, you can count on reliable operation. And, they're competitively priced. No one else offers these capabilities in low-profile keyboards.

Our low-profile designs are just part of a full selection: low-profile or standard; capacitance, hard contact or Hall effect technologies; full-travel keyboards or micro-travel touch panels.

For more information about our new low-profile capacitance and contact membrane keyboards, and the location of our sales offices around the world, call 815-235-6600. Or write MICRO SWITCH, The Keyboard Consultants, Freeport, IL 61032.
