Compact PC comes prewired and ready to go

Klockner-Moeller Corp., Natick, MA 617-655-1910

"SUCOS PS 21" programmable controller is recommended for use with machines of moderate complexity

requiring mainly logic and sequencing control, as well as counting and shift register functions. The compact unit has no modules; the number of inputs and outputs is predetermined and the power pack is built in. The PC and its 4K EPROM store comes prewired and needs only a screwdriver for installation.

Keyboard claims long life

Advanced Input Devices, Coeur d'Alene, ID 208-765-8000

Unitized keyboard peripheral features an elastomer switch mechanism combining a rubberized material with a controlled stress design that offers full-travel stroke without need for metallic springs. "Ergokey EK184" is a complete peripheral device, instead of a subframe keyboard, and costs less than a conventional subframe. Single sheet implementation of the elastomer allows for firm sealing, thereby shielding switch contacts from external environmental influences. Foolproof leveling mechanisms for the spacebar and larger keys eliminate wobble and rattle.
