

New heavy-duty pushbuttons need only $\frac{3}{8}$ in² per function!

BHI's new 91000H series proves that heavy-duty pushbuttons can be compact, elegant and modern. These beautiful little oil-tight units are only 1.46in (37mm) square, yet they can provide up to six separate control functions apiece. Plain buttons come in nine colours, indicator lights and identifying collars in six. Not only are the units themselves compact, but you can mount them (30.6mm single-hole fixing) on centres only $1\frac{5}{8}$ in (horizontally) or $2\frac{1}{4}$ in (vertically) apart. With each unit carrying contact blocks for up to eight circuits (a.c./d.c. voltages up to 600V, make/break currents up to 60A/6A), the 91000H is the best answer for literally thousands of pushbutton problems. Get the full story of these unique new pushbuttons today; ask for leaflet ZB119.
