

# FORM

# FIT

# FUNCTION

Until now only one lighted pushbutton line could supply your form, fit, and functional needs. Until now.

LICON presents the Series 50\* line of lighted pushbuttons and indicators designed to meet all your form, fit, and functional requirements. And best of all, it's completely interchangeable with the Micro Switch Advanced Manual Line (AML). That means you get second source dependability with the same high quality built into every switch.

Designers will like the Series 50's because they look so good. Electronic Engineers because they're so easy to mount and wire. Buyers as a solid back-up insurance source for their major investment in a switch design.

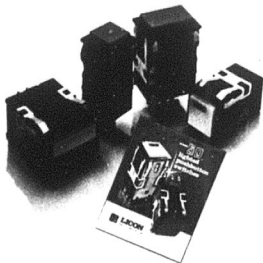

The Series 50 line has all the quality features you would find in the AML. Like your choice of illumination in incandescent or LED, button heights, full or split screen displays, colors, variety of lens caps in square or rectangular shapes,

legend sizes and momentary or alternate action. Series 50 also offers solid state or electro-mechanical design. Interchangeable center and end barriers and choice of termination.

But Licon believes there's more to building better panels than offering a second pushbutton source. Our secret for success and long life in this highly competitive market has been adherence to a simple philosophy. Quick responsiveness to customer needs.

To get samples of LICON's Series 50 line for test qualification, or for a complete demonstration, call toll free 800-621-5123. LICON is ready to provide you with field engineers for application and qualification assistance, plus a network of authorized distributors for local availability. We also want to offer you our new Series 50 catalog. Simply write LICON, 6615 West Irving Park Road, Chicago, Illinois 60634; TWX: 910-221-0275.
