

Is it possible to replace one of their lighted pushbuttons with one of ours?

It is now.

In fact, the LICON® Series 50 line of lighted pushbuttons and indicators is completely interchangeable with the Micro Switch AML line. With the Series 50 as your second source, you'll not have to worry about the possibilities of slow deliveries, quality problems, switches becoming backlogged, or higher prices because of downtime.

The Series 50 switches have all the same features AML offers. Choice of illumination in incandescent or LED. Button heights, full or split screen displays. Choice of colors, a variety of lens caps, square & rectangular shapes, legend sizes and momentary or alternate action. Solid state or electro-mechanical design. Interchangeable center and end barriers and a choice of terminations. All the features that make

Series 50 the most comprehensive second source available.

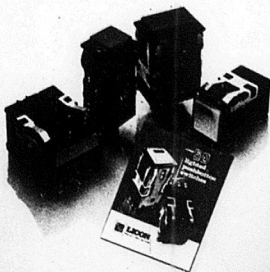

Of course you get LICON reliability and long life. A hallmark since their beginning.

Now it is possible to replace one of theirs with one of ours. Specify the LICON Series 50 line of pushbuttons and indicators as your second source.

To get samples of the Series 50 line for test qualification, or for a complete demonstration, call toll free 800-621-5123. LICON is ready to provide you with field engineers for application assistance, plus a network of authorized distributors for local availability.

We also want to offer you our new Series 50 catalog simply by writing LICON, 6615 West Irving Park Road, Chicago, IL 60634; TWX: 910-221-0275.
