

SEE WHAT'S HAPPENING... SOLVE MAN-MACHINE COMMUNICATION PROBLEMS

DATA • PANEL Display Systems convey information clearly and concisely with graphic versatility never before available. You get a new world of freedom in styling and panel layout... information on display with an entirely new look. Alpha-numeric messages and symbols are brilliantly visible behind planes of glare-free graphic gray glass. Only illuminated indications are visible. Operators are not confused by the visual presence of non-indicating indicators—they suffer less visual fatigue, make fewer errors.

Only the DATA • PANEL Display System concept can give you such latitude in selecting the size, shape, color and location of messages... and of overall dimensions. DATA • PANEL Display Systems can be custom designed as a complete electronic assembly ready to operate (via multi-pin connectors) from the signal voltages of any analog, digital or hybrid system. Switches, in a wide variety of types and actions can be mounted in the panels as an integral part of the DATA • PANEL Display System. Write for new, full story brochure, specifications and ordering information.

Here's proof of visual clarity: Designed for the GP-4 Digital Computer of General Precision Inc.'s. Link Group, this DATA • PANEL Display System has 469 separate message displays. But, the operator sees only the important illuminated messages. Permanently visible legends (lower half of panel) can be provided as desired. This panel also includes readouts and pushbuttons for alternate, momentary and interlock switches.

VERSATILITY

Here's proof of visual versatility: At Little Gypsy Power Plant of Louisiana Power & Light Company, all phases of a steam generating plant monitoring system are pictorially displayed on one large panel... from

gas input, left, to main load breaker, right. Status reports, invisible when off, appear in color in boxes located at appropriate points on the panel. Pictorial displays and symbols are permanently visible.

Look Alikes!

for simplified layout... distinctive panel styling!

FOUR CONTROL FUNCTIONS IN IDENTICAL ILLUMINATED WORD INDICATING DEVICES FOR OPTIMUM CONSOLE STYLING.

When appearance counts, design your console control panel with MSC miniature information display and control devices. Functionally different, but identical in appearance, their clean, uncluttered, full-view lens and bezel design offers maximum legend area in the simplest form for distinctive styling.

Pushbutton Switches / Word Indicators

Series 90E units feature two lamps for split or two color display. Available for 2PDT or 4PDT momentary or alternate switching or for basic word indication. All terminals at rear. Ask for Catalog 2008.

Tellite Word Indicating Pilot Lites

Series 80E Tellites provide two-lamp split or two-color display, or two-lamp reliability. Combination screw/solder terminals at rear. Integrated mounting sleeves, no brackets. Detailed in Catalog 2006.

Fuse-Lite Indicating Fuse Holders

Series 70E Fuse-Lites include two lamps and a standard fuse. Optional resistance limiter or isolated lamp circuits. Fuse and lamps easily changed from panel front. Terminals at rear. Easy to mount. Catalog 2005.
