

**Sure we make mistakes.  
The difference is we find them  
before our customers do.**

No component is more expensive than the one you've bought and can't use.

At MICRO SWITCH, we know people can make mistakes. But we also know people can find them. So even though our production people take a great deal of pride in their work, we still back them up. With our Quality Assurance Program.

Quality assurance engineers do not become involved just during production. A quality assurance engineer is actually a part of every design team working with the product from concept through final design and manufacturing.

Inspectors use everything from simple hand-held ring gauges to ultra-sophisticated electronic equipment. But the objective is the same. To see that every MICRO SWITCH product is everything our designers intended it to be.

To insure that nothing slips through, we're constantly running spot checks after assembly. (That is, if it's not an item where every unit is inspected.)

In other words, our people feel that quality is everybody's responsibility, not just our inspectors'. And the results speak for themselves.

You see, when you buy a MICRO SWITCH product, you're buying more than a component. You're buying a company. A company with

capabilities to help solve your problems. Whether through research and development. Innovation. Availability. Reliability. Or Quality Assurance.

MICRO SWITCH. Consider what it would cost to have anything less.

For more information, write for our Quality Assurance booklet.

MICRO SWITCH, Freeport, Illinois 61032. Or call 815/235-6600.

MICRO SWITCH products are available worldwide through Honeywell International.
