

The first LED pushbutton that's as bright as an incandescent, but doesn't burn out like one.

Our AML pushbuttons, indicators, paddles and rockers have a new light source. A unique, dual chip LED.

Like other LED's, this one will last a long time (its half-life is 100,000 hours or more). It resists shock and vibration. It uses only half the current of an incandescent. It will save you money on repairs. And comes in red, yellow and green.

But unlike all other LED's, this one is very bright. The kind of brightness you'd expect from an incandescent.

And a special adapter makes it as easy to install as a standard T1 $\frac{3}{4}$ wedge base.

In addition to this one very 'bright' idea, we've made some other additions to the Advanced Manual Line. Like a keylock switch, a protective panel seal, and a switch guard.

Not to mention a new solid state LED annunciator, with more room for legends.

For details about these and other bright ideas for control panels, and the locations of our sales offices and distributors around the world, write MICRO SWITCH, Freeport, Illinois 61032. Or call 815-235-6600.
