

# A pushbutton panel should be designed for parts of the body besides fingers.

When we designed the Advanced Manual Line (AML), we included everything a designer could want.

Like a broad selection of pushbuttons, indicators, paddles and rockers. In a variety of shapes, sizes and colors. With LED, incandescent or neon illumination.

But what really makes AML unique is a small detail that others seem to have overlooked.

The people who use them. Which is why they're not only appealing to fingers, but other parts of the body as well.

That isn't to say we've neglected the person who puts the panel together. Because AML has single level termination for easy wiring and low installation cost. And electrical flexibility that ranges from solid state to electronic and power duty control.

With AML, you clearly design panels around people who use them, and not just their fingers.
