

To appreciate our reputation for service and quality, you have to go back to the basics.

Solve a problem. That's what our 1932 basic switch, the world's first precision snap-action switch, did for our first customer. And that's what we're doing for you today — by building quality products, broadening our line to meet your needs, and assisting you before and after the problem is solved.

Nearly every precision basic switch you can buy is modeled on a MICRO SWITCH original that responded to, or anticipated, changing needs. As a result of our problem-solving tradition, we now offer you 6,000 basic switch listings, including switches designed to meet international standards; switches that withstand severe environments; switches with special actuators. You'll find a switch with the right combination of electrical specifications, operating characteristics, and price.

A comprehensive quality program assures that the switches will meet your AQL standards. You'll save on inspection costs and service calls. And you can be confident that the switches will operate reliably and precisely for as long or longer than anyone else promises. Not only that, our 50 years' experience is available to you through field engineers and an international network of distributors, including over 350 in the U.S.

So call us today with your application problem. We've built our solutions on the best basics around.

For more information, including the locations of our sales offices and authorized distributors around the world, call 815-235-6600. Or write MICRO SWITCH, The Sensor Consultants, Freeport, IL 61032.
