

With our relay,

MICRO SWITCH

FREEPORT, ILLINOIS 61032
A DIVISION OF HONEYWELL

MICRO SWITCH products are available worldwide through Honeywell International

CONTROL ENGINEERING

low overall cost is an open and shut case.

The true cost of an industrial relay isn't on the price tag. Rather, it's the cost-per-pole on the panel, ready to work.

Lowest cost-per-pole.

Our RY relay offers the lowest cost-per-pole because we give you something no one else does: a unique snap-open design.

The result is the fastest contact conversion around. And there are no loose parts or wires to remove. Even when changing the coil.

Lower maintenance and inventory, too.

Maintenance also takes less time because our contacts are always visible. And since the RY can be used for either 300v or 600v applications, it takes less money and space to stock them.

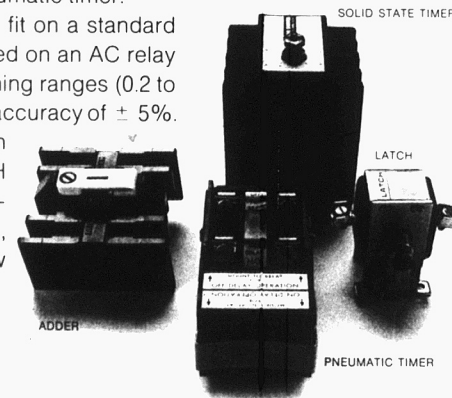

The MICRO SWITCH RY is both UL and CSA listed and has passed the rugged test of a major auto manufacturer.

A new pneumatic timer.

Choose from accessories such as adders to make up to 12 poles, latches, solid state timers . . . and now a pneumatic timer.

This new inexpensive timer will fit on a standard 2, 3, or 4 pole AC relay or can be used on an AC relay without poles. It's available in two timing ranges (0.2 to 60 sec. and 5 to 200 sec.) with repeat accuracy of $\pm 5\%$.

For more information, get in touch with your MICRO SWITCH Branch Office or Authorized Distributor (Yellow Pages, "Switches, Electric"). Or write today for our new Product Brochure RY.
