

Now, take inches off your panel.

Give or take a few millimeters, our new PW miniature industrial oilights can reduce the size of your panel by about 50%.

Which isn't half bad considering they're as reliable and attractive as anything twice their size. And they offer you a choice of UL listed push-on or screw terminals as exclusive features.

There's a complete line, including lighted and unlighted pushbuttons, one and two lamp indicators (also exclusive), selectors and selector-push units. So you're sure of the right control for your job. In the least amount of space.

PW's can also save you time and provide multiple-circuit capability, to boot. Up to four modular snap-in contact blocks (form C, X, Y standard and form C electronic duty) may be used with pushbuttons, selectors and selector-push units. While lighted pushbuttons will accept up to two blocks.

Call your MICRO SWITCH Branch Office or Authorized Distributor (Yellow Pages, "Switches, Electric") or write.
