Now, you have an even greater choice of 15mm or 10mm Tini-DW Multi-Switch switches. Like our 15mm pushbutton with a new, unique internal "flip-flop" mechanism. It provides color indicator panels for instant position recognition. There's one bright color for the "in" position (with or without legends), and another for the "out" position (and/or legend). Six colors are offered: red, green, blue, yellow, black and white. And, it's an energy saver! There is no electrical energy, no lamp replacement, no heat generation and no extra switching.

Our 10mm Tini-DW switches are ideal where size is a crucial factor. We offer a full set of mechanical functions and a wide choice of pushbutton colors, legends and terminals.

Of course, all Tini-DW switches feature our exclusive "snap-slide" switching technique, give up to 18 stations in a row without bowing and have full 0.5A, 125VAC or DC rating.

Applications include analog and digital computers, analyzers, transmitters and receivers, intercoms, numerical control, ground support systems, scientific instruments, home entertainment systems and appliances.

When size, rugged reliability and low cost are primary considerations, look to Switchcraft for the answer. Call Ken Kline at 312/792-2700. Or send for New Product Bulletin No. 349.
