

# TRANSFLEX™

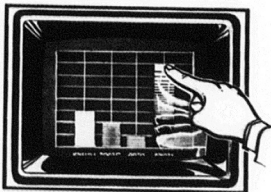

the membrane switch  
that lets your imagination  
show through.

TransFlex is the new membrane switch clear enough to read through. Brings people and computers closer together. And that's just the beginning...

As easy as touching a picture, graph, word or letter. TransFlex activates the desired response.

For analog or XY matrix panels. TransFlex membrane switches utilize our highly linear Intrex® films,

solving your most critical resistivity requirements.

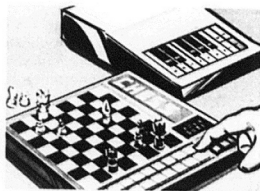

**Fully conductive.** TransFlex's transparent conductors do not interfere with the display. Image and readability are actually enhanced.

**Can be designed** to your specifications for size, resistivity, light transmission...and to control any graphic pattern.

**Can be formed** to the contour of your CRT screens or control panels.

**Can be sealed** for cleaning and weatherproof versatility.

**Can be backlit** for many uses we know about...and many more you can think of.

**Learn more about TransFlex.**
