

LSI-11-compatible system achieves high performance in small packages

Andromeda Systems, Inc., 14701 Arminta St., Panorama City, CA 91402, Jim Reynolds (213) 781-6000. P&A: See text.

The compact 11/M series of LSI-11-compatible computer systems and peripherals features 32 kwords of memo-

ry, dual or quad-drive disk storage to 1.5 Mbyte, and up to eight serial interface channels.

The 11/M1 which measures 13 x 4 x 15 in., can be configured with 64 kbytes of main memory, single or double-headed minidisk drives with

389 kbytes of on-line storage and two or four serial interface channels. A parallel printer interface can be substituted for one of the serial channels.

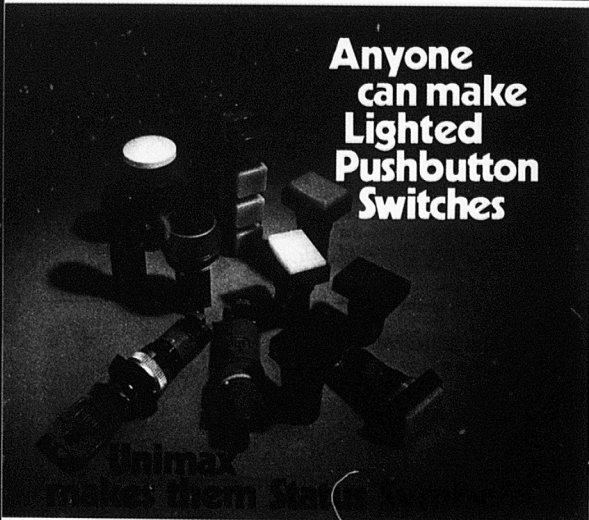

The 11/M2 system, which measures 13 x 8 x 15 in., uses dual minidisks and a double-density DMA disk controller. The system can be configured with 64 kbytes of main memory, single or double-headed minidisk drives with up to 778 kbytes of on-line storage and up to eight serial interface channels.

The Dual Mini-Disk System (DMDS), which fits into a 4 x 13 x 15-in. tabletop enclosure, ranges from a dual-drive, 40-track, single-headed, single-density system with 205 kbytes of storage to a quad drive with 40-track, double-headed, double-density storage of 1.5 Mbytes. The disk controller is a single, dual-width, Q-bus-compatible circuit card that plugs into a LSI-11 CPU.

The 11/M1 is priced at \$3995; the 11/M2 is \$4995; and the DMDS ranges from \$1915 to \$2454.
